

B8: Additional Web-Based Data Dictionaries and Standards

The following three data dictionary resources are websites rather than PDFs, and so are included here as links rather than files as with the other data dictionaries in this toolbox.

1. A summary index of health data dictionaries from Australia
<https://meteor.aihw.gov.au/content/index.phtml/itemId/268110/letter/A>
2. OData provides a way to break down data silos and increase the shared value of data by creating an interoperable system with data producers, enabling more applications to make sense of a broader set of data. https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=odata#overview
3. TOGAF standard from the Open data group
<https://pubs.opengroup.org/architecture/togaf9-doc/arch/>
4. The Indonesian Health Data Dictionary (KATA Hat - I) is a list of information on data standards for all Health Information Systems across Indonesia in order to create a common meaning and increase the validity and reliability of health data. <http://idn-hdd.kemkes.go.id/>
